Fiber Bundles, Gauge Theories and Gravity 3. Proof. The coset K is an invariant subspace with respect to the stability group H and thus a homogeneous space, which is the requirement for K to be the fiber of an associated bundle [20]. From Theorem 2.1 it is clear that a point $q \in GR$ will split $q = (u, k)$ where $u \in HR$.

Mathematical formalism. Mathematically, a gauge is just a choice of a (local) section of some principal bundle. A gauge transformation is just a transformation between two such sections. Although gauge theory is dominated by the study of connections (primarily because it's mainly studied by high-energy physicists),...

A sphere bundle is a fiber bundle whose fiber is an n -sphere. Given a vector bundle E with a metric (such as the tangent bundle to a Riemannian manifold) one can construct the associated unit sphere bundle , for which the fiber over a point x is the set of all unit vectors in E_x .
