A motorcycle engine is an engine that powers a motorcycle. Motorcycle engines are typically two-stroke or four-stroke internal combustion engines, but other engine types, such as Wankels and electric motors, have been used.. Although some mopeds, such as the VéloSoleX, had friction drive to the front tire, a motorcycle engine normally drives the rear wheel, power being sent to the driven wheel ...

Motorcycle engine - Wikipedia

What kills all engines is the number of cold starts and how hard the engine is used before it's oil is warm. This is why very high mileage engines tend to have been used for long journeys rather than many short journeys. This is the reason why it is said that 90% of all engine wear happens in the first couple of miles.
